SHARAN K SHAJI

Senior Software Developer

Enterprise Architecture | Full-Stack Ownership | Technical Leadership

Dubai, UAE | +971 50 980 4082 | sharansrn007@gmail.com

sharan-ks.com | github.com/sharan-dev-ae | linkedin.com/in/sharan-k-shaji-dev

Senior full-stack engineer with 5+ years of experience designing, building, and supporting enterprise applications in production. Owns the architecture and delivery of NAFFCO's 25+ module ERP ecosystem on Angular, ASP.NET Core, and SQL Server, spanning system design, API development, SQL performance optimization, CI/CD, and production support. Leads developers through code reviews, task allocation, technical guidance, and delivery coordination, and translates complex business rules into maintainable, scalable systems.

SKILLS

- **Core Stack:** Angular, ASP.NET Core Web API, C#, SQL Server (T-SQL, stored procedures), Dapper, REST APIs, GitHub Actions, TypeScript
- **Architecture & Practices:** System Design, API Development, SQL Performance Optimization, Enterprise Applications, Microservices, Role-Based Workflows, Technical Leadership, Production Support
- **DevOps & Hosting:** CI/CD Pipelines, GitHub Actions Self-Hosted Runners, IIS, SignalR, Docker, Git, Jenkins, AWS Lambda
- **Tools:** Visual Studio, VS Code, Postman, JIRA, Linux, AI-assisted development
- **Secondary:** React.js, Next.js, React Native, Node.js, Python, JavaScript, MongoDB, MySQL

EXPERIENCE

Senior Software Developer, Naffco FZCO | Dubai, UAE — Jun 2025 – Present

- **Enterprise Automation:** Led full-stack development across a 25+ module ERP ecosystem, automating complex business processes across estimation, sales, project execution, contracts, and financial operations to reduce manual intervention and repetitive data entry.
- **Data Accuracy & Integration:** Engineered centralized workflows, business validations, and SQL-driven calculations to improve data consistency, accuracy, and reliability across multiple departments, ensuring teams operate on synchronized information.
- **Business Intelligence & Analytics:** Developed analytical dashboards and reporting systems that identify operational bottlenecks, project delays, financial discrepancies, and collection risks, enabling management to proactively identify issues and make informed decisions.
- **Transparency & Traceability:** Implemented role-based approval workflows, audit trails, automated notifications, and status tracking, improving accountability and end-to-end visibility across interconnected business processes.
- **Technical Leadership & Architecture:** Led developers through technical guidance, code reviews, task allocation, and delivery coordination while designing scalable solutions using Angular, ASP.NET Core Web API, SQL Server, and Dapper.
- **DevOps & Reliability:** Architected CI/CD automation with GitHub Actions, secure deployment approvals, real-time monitoring, and automated rollback mechanisms to reduce manual release activities and improve production reliability.

Software Developer, Interfuture Technologies | Dubai, UAE — Aug 2023 – Apr 2025

- Led design and development of HRMS modules (payroll, onboarding, leave, vouchers, travel claims, inventory, dashboards) using Angular, React.js, ASP.NET, and Node.js in an Agile team.
- Engineered an estimation engine processing input from 20+ building structures, improving material requirement accuracy by 30% and optimizing resource allocation.
- Built microservices on AWS Lambda, set up CI/CD pipelines, and initiated an AI chatbot integration to automate inspection service bookings.

Software Developer, Coddle Technologies | Kozhikode, India — Apr 2022 – May 2023

- Contributed to a cross-platform React Native application for a major client in India, focusing on performance, clean code, and UI/UX best practices.
- Developed an admin panel for a healthcare facility using React and Node.js, building reusable, performance-optimized components.

Software Developer, Quest Innovative Solutions | Kozhikode, India — Aug 2021 – Apr 2022

- Delivered full-stack web applications with Django and Flask, covering front-end and back-end integration for 15+ projects.

EDUCATION

Bachelor of Computer Science, Calicut University | Malabar College, Kozhikode **Jun 2018 – Apr 2021**

- Built an E-Token Management System using Flask and Python as academic coursework.

PROJECTS

EMS: Enterprise Estimation Management System (NAFFCO)

- Architected one of the most complex ERP modules with primary ownership of the Angular frontend and ASP.NET Core backend and major contribution to the SQL Server layer, integrated with the wider ERP for pricing, quotations, documents, and dashboards.
- Built the estimation engine for floor-wise and system-wise estimation, with calculation logic in SQL Server stored procedures (Dapper, table-valued parameters for bulk operations) and multiple estimation iterations preserved across scope and technical revisions.
- Managed quotation and estimate revisions with full approval histories and audit trails, so every revision stays traceable to its source request.
- Designed dynamic workflows with role-based task routing, conditional approval chains, status transitions, escalations, and reassignment, driven by organization- and product-specific business rules.
- Added AI-assisted document analysis to extract quantities from engineering spreadsheets and specifications into estimates.

Project Management & Execution Platform (NAFFCO)

- Designed and built the platform from scratch across Angular, ASP.NET Core Web API, and SQL Server, owning the architecture, data model, and end-to-end delivery for project planning, execution, monitoring, and financial control.
- Modeled work packages with weighted progress, milestones, manpower tracking, material tracking, and site activities, so operational progress and commercial progress are measured on one consistent basis.
- Built financial forecasting covering invoicing and collection forecasting, with SQL-based calculations that consolidate updates into project KPIs for progress variance, financial exposure, collection risks, and delays.
- Delivered executive dashboards and drill-down reporting from portfolio level to site and financial detail, with role-based access and workflows.

Enterprise CI/CD Automation & Deployment Management Platform

- Architected a deployment platform (Angular, ASP.NET Core Web API, C#, SQL Server) that orchestrates GitHub Actions workflows on Windows self-hosted runners for enterprise Angular builds and IIS releases.
- Separated the build workflow (compile, artifact staging, backup) from the production deployment workflow, so only approved builds are released through controlled workflow dispatch.
- Implemented a secure approval gate with email-based OTP verification and role-based authorization, enforced through ASP.NET Core APIs.
- Built real-time monitoring with SignalR covering execution progress, workflow status, error logs, and deployment history stored in SQL Server.
- Engineered automated backups, post-deployment verification, and rollback to recover quickly from failed releases and keep every deployment traceable.

Alnouras: Waste Management Operations Platform

- Built an operations platform connecting employees, vehicles, trips, routes, payroll, invoicing, trip sheets, and performance into one ecosystem.
- Implemented geolocation-based tracking, route and trip analytics, efficiency monitoring, and operational dashboards for fleet and workforce visibility.

Social Networking & Content Management System

- Developed a cross-platform iOS and Android app in React Native, converting Figma designs into responsive interfaces.
