SHARAN K SHAJI

Senior Software Developer

Dubai, UAE | +971 50 980 4082 | sharansrn007@gmail.com
sharan-ks.com | github.com/sharan-dev-ae | linkedin.com/in/sharan-k-shaji-dev

Full-stack developer with 5 years of experience building enterprise software that streamlines business operations. Hands-on across the full development lifecycle, with delivery spanning ERP, HR, payroll, and security and automation estimation systems, plus web and mobile applications. Strong in Angular and ASP.NET Core, with a focus on scalable architecture, clean reusable code, and measurable business impact. Applies modern tooling and AI-assisted development, including prompt engineering and a custom inspection chatbot, to ship faster and more reliably.

SKILLS

- **Programming Languages:** TypeScript, JavaScript, C#, Python, Go, PHP, Java, C, HTML, CSS
- **Frameworks & Libraries:** Angular, ASP.NET Core, React.js, Next.js, Node.js, NestJS, Vue.js, React Native, Django
- **Developer Tools:** Git, Visual Studio, VS Code, Postman, Jenkins, JIRA, Docker, Linux, AI-assisted tools
- **Databases & Hosting:** SQL Server, MySQL, MongoDB, Firebase, AWS, IIS, cPanel, VPS, Render
- **Architecture & DevOps:** Microservices, Serverless, CI/CD Pipelines, Load Balancing, REST APIs

EXPERIENCE

Senior Software Developer, Naffco FZCO | Dubai, UAE — Jun 2025 – Present

- Developed, customized, and maintained a large-scale enterprise ERP ecosystem spanning 25+ business modules, delivering end-to-end solutions across Angular, ASP.NET Core Web API, SQL Server, Dapper, and RESTful services for multiple departments and business units.
- Designed and delivered complex modules and workflows, including Engineering Management System (EMS), Sales Order, Contract Management, Fabrication Management, Forecasting & Collections, Ticket Management, Organization Hierarchy, Employee Services, and executive dashboards, translating business requirements into scalable production solutions.
- Owned full-stack development from database to user experience: SQL Server schemas, optimized stored procedures and queries, backend APIs, reusable Angular components, role-based workflows, real-time functionality, reporting, notifications, and integrations.
- Improved scalability, performance, and delivery across enterprise systems by optimizing database and API performance, building reusable architecture, automating CI/CD, and resolving production-critical issues, working directly with business stakeholders and cross-functional teams in Agile cycles.

Software Developer, Interfuture Technologies | Dubai, UAE — Aug 2023 – Apr 2025

- Led the design and development of HRMS modules, including payroll, onboarding, leave management, vouchers, travel claims, inventory, and dashboards, using Angular, React.js, ASP.NET, and Node.js in an Agile environment.
- Engineered an estimation engine that processes user input from 20+ building structures, streamlining project planning and improving material requirement accuracy by 30%, which optimized resource allocation.
- Built microservices on AWS Lambda, managed IT infrastructure, and set up CI/CD pipelines for secure, scalable operations. Initiated an AI chatbot integration to automate inspection service bookings.

Software Developer, Coddle Technologies | Kozhikode, India — Apr 2022 – May 2023

- Contributed to a cross-platform mobile application in React Native for a major client in India, focusing on performance optimization, clean maintainable code, UI/UX best practices, and on-time Agile delivery.
- Developed and maintained an admin panel for a healthcare facility using React and Node.js, optimizing components for performance and building reusable components for scalability and maintainability.

Software Developer, Quest Innovative Solutions | Kozhikode, India — Aug 2021 – Apr 2022

- Managed 15+ academic projects built with Django and Flask, leading front-end and back-end integration using HTML, CSS, JavaScript, Ajax, and JSON to deliver dynamic, interactive web applications with a focus on performance, scalability, and user experience.

EDUCATION

Bachelor of Computer Science, Calicut University | Malabar College, Kozhikode **Jun 2018 – Apr 2021**

- Built an E-Token Management System using Flask and Python as academic coursework, streamlining token generation and management.

PROJECTS

EMS: Enterprise Estimation Management System

- Played a major role in architecting and developing the EMS platform, with primary ownership of the Angular frontend and ASP.NET Core backend and extensive contribution to the SQL Server layer, evolving one of the most complex modules in the enterprise ERP.
- Built an estimation engine supporting floor-wise and system-wise estimation, letting estimators define quantities, revise requests as project requirements change, manage multiple iterations, and preserve continuity across scope and technical revisions.
- Engineered automated workflows across the full estimation lifecycle: role-based task routing, dynamic assignments, conditional approval chains, status transitions, notifications, escalations, reassignment logic, and organization- and product-specific business rules.
- Delivered pricing, quotations, documents, dashboards, audit trails, approval histories, and calculations for high-volume transactional workflows, keeping the system scalable and adaptable to changing business requirements.

Project Management & Execution Platform

- Designed and built the platform from scratch, owning architecture and end-to-end development across Angular, ASP.NET Core Web API, and SQL Server, covering project planning, execution, monitoring, and financial control in one system.
- Engineered a structured project model covering work packages, weighted progress, milestones, manpower, material tracking, site activities, invoicing, collections, and forecasting to measure both operational and commercial progress.
- Built calculation and workflow logic that consolidates updates from multiple operational layers into real-time project KPIs, tracking progress variance, pending activities, financial exposure, collection risks, delays, and overall project health.
- Developed executive dashboards, drill-down reporting, and role-based workflows, giving management a single source of truth from portfolio-level visibility down to site and financial detail.

Enterprise CI/CD Automation & Deployment Management Platform

- Designed and developed a centralized CI/CD management platform using Angular, ASP.NET Core Web API, C#, and SQL Server to automate and monitor enterprise Angular application builds and IIS deployments through GitHub Actions and Windows self-hosted runners.
- Engineered a two-stage deployment pipeline that separates build, artifact staging, and backup operations from production deployment, with workflow dispatch controls and release of approved builds only.
- Implemented a secure deployment approval mechanism with email-based OTP verification, role-based authorization, and controlled workflow execution through ASP.NET Core APIs.
- Developed a real-time deployment dashboard with Angular and SignalR, covering execution tracking, workflow status, debugging information, error logs, and deployment history stored in SQL Server.
- Integrated automated backups, deployment verification, and rollback mechanisms to improve release reliability, traceability, and recovery from failed deployments.

Alnouras: Waste Management Operations Platform

- Built an operations platform for a waste-management business that connects employees, vehicles, trips, routes, payroll, invoicing, trip sheets, and performance into one ecosystem.
- Implemented geolocation-based tracking, route and trip analytics, efficiency monitoring, and operational dashboards for real-time visibility into fleet movement, workforce activity, and business performance.

Social Networking & Content Management System

- Designed and developed a cross-platform iOS and Android mobile application integrating key business processes with a smooth user experience.
- Converted Figma designs into responsive, pixel-perfect React Native interfaces, collaborating with cross-functional teams to optimize performance and deliver user-driven features.
