SHARAN K SHAJI

Senior Software Developer

Enterprise Applications | Full-Stack Development | Technical Leadership

Dubai, UAE | +971 50 980 4082 | sharansrn007@gmail.com

sharan-ks.com | github.com/sharan-dev-ae | linkedin.com/in/sharan-k-shaji-dev

Senior full-stack engineer with 5+ years of experience (3+ years in the UAE) designing, building, and supporting enterprise applications in production. Leads development across a large enterprise ERP ecosystem on Angular, ASP.NET Core, and SQL Server, covering system design, API development, SQL performance optimization, CI/CD, and production support. Guides a development team and turns complex business rules into maintainable systems that cut manual work.

SKILLS

- **Core Stack:** Angular, ASP.NET Core Web API, C#, SQL Server (T-SQL, stored procedures), Dapper, REST APIs, GitHub Actions, TypeScript
- **Architecture & Practices:** System Design, API Development, SQL Performance Optimization, Enterprise Applications, Microservices, Technical Leadership, Production Support
- **Backend & Real-Time:** Node.js, SignalR, AWS Services (Lambda, S3, API Gateway)
- **DevOps & Tools:** CI/CD Pipelines, Self-Hosted Runners, IIS, Docker, Git, Jenkins, Visual Studio, Postman, JIRA
- **Secondary:** React.js, Next.js, React Native, JavaScript, Python, MongoDB, MySQL

EXPERIENCE

Senior Software Developer, Naffco FZCO | Dubai, UAE **Jun 2025 – Present**

- **Enterprise Automation:** Led full-stack development across most of a 25+ module ERP ecosystem, automating business processes across estimation, sales, project execution, contracts, and finance to reduce manual intervention and repetitive data entry.
- **Data Integrity & Reporting:** Built centralized workflows, business validations, and SQL-driven calculations so departments work from consistent data, with approval workflows, audit trails, and dashboards that surface project delays, financial discrepancies, and collection risks.
- **Technical Leadership & Architecture:** Lead developers through technical guidance, code reviews, task allocation, and delivery coordination while designing solutions on Angular, ASP.NET Core Web API, SQL Server, and Dapper.
- **Problem Solving:** Diagnosed a browser-freezing defect in an executive dashboard, traced to unstable template-bound array references triggering repeated change detection and chart resize loops, and fixed it at the root cause.
- **DevOps & Reliability:** Architected CI/CD automation with GitHub Actions, secure deployment approvals, real-time monitoring, and automated rollback to reduce manual release work and improve production reliability.

Software Developer, Interfuture Technologies | Dubai, UAE **Aug 2023 – Apr 2025**

- Led design and development of HRMS modules (payroll, onboarding, leave, vouchers, travel claims, inventory, dashboards) using Angular, React.js, ASP.NET, and Node.js.
- Engineered an estimation engine processing input from 20+ building structures, improving material requirement accuracy by 30%.
- Built microservices on AWS Lambda, set up CI/CD pipelines, and initiated an AI chatbot integration to automate inspection service bookings.

Software Developer, Coddle Technologies | Kozhikode, India **Apr 2022 – May 2023**

- Built a React Native application for a major client in India and a React and Node.js admin panel for a healthcare facility, focusing on performance and reusable components.

Software Developer, Quest Innovative Solutions | Kozhikode, India **Aug 2021 – Apr 2022**

- Delivered full-stack web applications with Django and Flask for 15+ projects.

PROJECTS

EMS: Enterprise Estimation Management System

- Played a major role in architecting one of the ERP's most complex modules, with primary ownership of the Angular frontend and ASP.NET Core backend and extensive contribution to the SQL Server layer, integrated with ERP pricing, quotations, documents, and dashboards.
- Built the estimation engine with two estimation modes (floor-wise and system-wise), calculation logic in SQL Server stored procedures (Dapper, table-valued parameters), and iterations preserved across scope revisions.
- Managed quotation and estimate revisions with approval histories and audit trails, so every revision stays traceable to its source request.
- Designed configurable workflows with task routing by role, conditional approval chains, escalations, and reassignment, driven by organization- and product-specific rules.
- Added AI-assisted document analysis to extract quantities from engineering spreadsheets and specifications.

Project Management & Execution Platform

- Designed and built the platform from scratch across Angular, ASP.NET Core Web API, and SQL Server, owning architecture, data model, and delivery for planning, execution, monitoring, and financial control.
- Modeled work packages with weighted progress, milestones, manpower, material tracking, and site activities, so operational and commercial progress are measured on one basis.
- Built financial forecasting for invoicing and collections, with SQL-based calculations that consolidate updates into KPIs for progress variance, financial exposure, collection risk, and delays.
- Delivered executive dashboards and drill-down reporting from portfolio level to site and financial detail.

Enterprise CI/CD Automation & Deployment Management Platform

- Architected a deployment platform (Angular, ASP.NET Core Web API, C#, SQL Server) that orchestrates GitHub Actions workflows on Windows self-hosted runners for Angular builds and IIS releases.
- Separated the build workflow (compile, artifact staging, backup) from production deployment, so only approved builds are released through controlled workflow dispatch.
- Implemented a secure approval gate with email-based OTP verification and role-based authorization, enforced through ASP.NET Core APIs.
- Built real-time monitoring with SignalR covering execution progress, workflow status, error logs, and deployment history stored in SQL Server.
- Engineered automated backups, post-deployment verification, and rollback to recover quickly from failed releases.

Alnouras: Waste Management Operations Platform

- Developed a centralized platform integrating employee management, fleet operations, trip scheduling, payroll, and invoicing.
- Implemented geolocation-based vehicle tracking to provide visibility into fleet movements and route progress.
- Built route and trip analytics with operational dashboards to monitor fleet activity and workforce operations.
- Digitized trip sheets and connected trip records with payroll and invoicing workflows to support operational and financial reporting.

EDUCATION

Bachelor of Computer Science, Calicut University | Malabar College, Kozhikode **Jun 2018 – Apr 2021**

- Built an E-Token Management System using Flask and Python as academic coursework, digitizing token generation and management and applying core web development and data-handling concepts.
- Participated in hackathons and technical workshops, building practical problem-solving, teamwork, and hands-on development skills.
